

# Package ‘ImFoR’

January 20, 2025

**Type** Package

**Title** Non-Linear Height Diameter Models for Forestry

**Version** 0.1.0

**Author** M. Iqbal Jeelani [aut, cre],  
Fehim Jeelani [aut],  
Shakeel Ahmad Mir [aut],  
Syed Naseem Geelani [aut],  
Mushtaq Ahmad Lone [aut],  
Asif Ali [aut],  
Afshan Tabassum [aut],  
Khalid Ul Islam [aut],  
Imran Rashid [aut],  
Md Yeasin [aut]

**Maintainer** M. Iqbal Jeelani <jeelani.miqlbal@gmail.com>

**Description** Tree height is an important dendrometric variable and forms the basis of vertical structure of a forest stand. This package will help to fit and validate various non-linear height diameter models for assessing the underlying relationship that exists between tree height and diameter at breast height in case of conifer trees. This package has been implemented on Naslund, Curtis, Michailoff, Meyer, Power, Michaelis-Menten and Wykoff non linear models using algorithm of Huang et al. (1992) <[doi:10.1139/x92-172](https://doi.org/10.1139/x92-172)> and Zeide et al. (1993) <[doi:10.1093/forestscience/39.3.594](https://doi.org/10.1093/forestscience/39.3.594)>.

**License** GPL-3

**Encoding** UTF-8

**Imports** stats, minpack.lm, Metrics, caret, tidyverse, nlme, ggpibr,  
ggplot2

**RoxygenNote** 7.2.1

**Depends** R (>= 2.10)

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2023-09-21 18:50:02 UTC

ImFoR	<i>Non-Linear Height Diameter Models for Forestry</i>
-------	---

---

### Description

Non-Linear Height Diameter Models for Forestry

### Usage

```
ImFoR(data, train_frac = 0.8)
```

### Arguments

data	Datasets
train_frac	Train-Test fraction

### Value

- metrics: Metrics of all applied models
- plot: Plot

### Examples

```
library("ImFoR")
data <- system.file("extdata", "data_test.csv", package = "ImFoR")
data_test <- read.csv(data)
Model<-ImFoR(data =data_test)
```
